SUMMARY

Computer Science Graduate focusing on Backend development with Full-stack flexibility. Experienced in building applications with Node.js and Java, and actively exploring modern backend services using Go (Fiber). Available for contracts, freelance roles, or immediate projects before upcoming military enlistment in April 2027.

SKILLS

Programming Languages: Java, Node.js, TypeScript, Go

Frameworks & Libraries: Spring Boot, Express, NestJS, Fastify, Fiber, Angular

Databases: MySQL, PostgreSQL, OracleDB

Tools: Docker, Podman, DBeaver, Postman, Git, RedHat OpenShift, Xampp, JMeter

WORK EXPERIENCE

TTB Bank | Backend Developer Intern **Dec 2025 – Present (11 Months)**

- **Project: Digital Document Wallet**
  - Architected and developed secure RESTful APIs connected with DB for efficient digital document storage, while building a frontend interface to fetch files and display analytical reports.
  - Implemented asynchronous API integrations with the NDID platform, handling callbacks and wait states for identity verification.
  - Applied enterprise-level security protocols, including data encryption/decryption, hashing, and digital signatures, to ensure document authenticity.
  - Formatted and optimized application logs for the ELK Stack by trimming long data fields to ensure clear error tracking, while also conducting API performance and load testing using JMeter.
- **Project: LINE OA Receipt OCR & Voice Rewards**
  - Core Backend & Security: Developed a secure backend system using NestJS and Fastify to handle LINE OA webhooks, implementing signature verification and rate limiting to prevent unauthorized requests and server abuse.
  - Azure AI Integration: Integrated Azure AI services to process Base64 receipt images via OCR for loyalty point calculations, while handling audio format conversions .m4a for Speech-to-Text and Text-to-Speech interactions.
  - Data Integrity & Donation Logic: Implemented duplicate receipt detection to ensure data accuracy and developed a donation workflow that integrates with an internal foundation API to deduct points.

Personal Project

Food Ordering Web (2024)

Tech: Node.js, Express.js, MySQL, SlipOK API

• Implemented dual-role platform (Customer/Vendor) for ordering food online.

• Integrated SlipOK API to verify payment slips and update transaction status.

• Built vendor dashboards to manage menus and sales analytics (daily/weekly/monthly).
